

Falling Petals

As Spring Term 2018 marches on, the WOU Safety Committee urges everyone to be mindful of falling petals, pine cones and twigs that are on the sidewalks, crosswalks and parking lots. This naturally occurring shedding from trees and squirrel activity pose slip and trip hazards.

Some tips for better traction and increased safety include wearing non-slip footwear, be aware of surroundings, slow down especially when it is actively raining or windy and stay focused on getting to your destination.

Another way to help with increasing safety is to dispose of twigs or pine cones into a trash can, so they are off the sidewalk and won't get caught up in Grounds Maintenance equipment.

If puddles of water appear around buildings or across sidewalks, please report those to Facilities Services at 503-838-8239 so maintenance workers can check things out and make repairs as needed.

If you come across anything on campus that is a safety issue, please report it. You can do this by emailing the concern to safety@wou.edu with as much information as possible, including a photo if possible.

A second option for reporting would be to contact Facilities Services at 503-838-8239.

Exterior Lights and Bikes

With Spring upon us, it will be getting lighter earlier in the day and staying lighter longer. If you are around campus and see an exterior light that is out in the safety corridor, parking lots, around buildings, etc, please report those to Facilities Services 503-838-8239 so they can have the lights serviced.

A photo can also be emailed to safety@wou.edu with the

exact location of a light that is out.

If a light is out in a parking lot making it unsafe to travel to your car, contact Campus Public Safety at 503-838-8481 for an officer to walk you to your vehicle.

If you have a bike on campus, there are several shelters where they can be locked up as well as Bike Locker rentals through Parking Services.

Bikes can also be registered through Campus Public Safety to help with investigations of vandalized or stolen bikes.

Did you know:

Commencement is June 16th at 1030am at McArthur Stadium.

This is 27 days away!

Special points of interest:

- With the heat here and continuing, know the information about temperatures that interiors of cars can get to, before leaving a child or pet inside.
- https://www.avma.org/public/ PetCare/Pages/pets-in-vehicles.aspx

As the temperatures fluctuate outside, dressing in layers provides the option to adjust as the temperatures do.

Remember staying hydrated is important!

If you are concerned about a building or office due to its temperature, contact Facilities Services with details. They will do everything possible to keep buildings and offices within the campus temperature norm of 68 to 72 degrees. There are several requirements before a space heater can be used in an office space. Below are a listing of some requirements, though it is not an exhaustive list. Be sure to check with your Supervisor or Risk Management with any questions that can't be answered from below.

- Office temperatures are consistently outside the Campus norms of 68 to 72 as measured by Facility Services
- Physician approves use of the space heater through Human Resources Office.
- Any approved space heater must have a tip over power off switch and be turned off and unplugged each night.

Power Strips, Extension Cords, SDS binder, and Ergonomics oh my

Extension cords and Power Strips are commonly used cables on campus. It is important when using these cords to know the difference between them with regard to safety. In addition, cords need to be covered that could be a potential trip hazard.

Extension cords are a great option for temporary plugging in of equipment (less than a day—24 hours). If a longer term solution is needed then a power strip is the choice.

Power strips are a great option for long term equipment use since most have surge protectors that provide safety for the equipment from power spikes.

If a power strip is not ideal for a long term solution, then work with your supervisor or Building Manager and Facilities Services to come up with something to satisfy the long term need. Do you know what a Safety Data Sheet (SDS) is? Do you know where your building or office SDS binder is located and how to read it?

If you answered No to one or both of these questions, then some additional training is needed as soon as possible. Please visit the website below to read materials that are mandatory for all WOU staff and faculty to know per OSHA regulations

http://www.wou.edu/safety/risk-management/hazardous-chemicals/

For a video about the Global Harmonizing System and Hazard Communication, go the Human resources Training Calendar and select "Hazard Communication"

http://www.wou.edu/hr/resources/trainingcalendar/

According to Oregon OSHA, "the goal of Ergonomics is to eliminate injuries associated with the overuse of muscles and tendons." (http://osha.oregon.gov/Pages/topics/ergonomics.aspx)

This reduction can be achieved in many ways, one of them being to take micro-breaks to stretch the back, arms, neck, and legs. This provides muscles time to relax from a repetitive task and return to a normal position.

There are many other advantages to good ergonomics. OSHA has put together some good information on this and the website is noted below.

http://osha.oregon.gov/OSHAPubs/ergo/ergoadvantages.pdf

Training opportunities:

Women's Self-Defense classes—http://www.wou.edu/safety/services/womens-self-defense-class/

Human Resources and Campus Public Safety have campus wide trainings available. View the training calendar to see details and register. http://www.wou.edu/hr/resources/trainingcalendar/
