# Structural Design Calculations

OMIC Additive Manufacturing Center – Filter Platform  
Scappoose, OR

## Client Information

Al Peterson  
AKAAN Architecture + Design LLC  
101 St Helens St  
St Helens, OR 97051

## Project Site

OIT Manufacturing Innovation Center  
33701 Charles T. Parker Way  
Scappoose, OR 97056  
45.7668, -122.8725

## Prepared By

Peterson Structural Engineers  
June 29, 2023  
Project No. 1901-0313

## Endorsement

EXPIRES 12/31/24

## Scope

To provide structural calculations for design of the filter platform at the location given on the cover page. Elements under review include design of the catwalk, guardrail and attachments to the existing steel manufacturing framed building. Any other elements not specifically referenced in these calculations are outside the purview of these calculations and are designed by others.

## Design Criteria

### Gravity Loading

#### Dead Load

Catwalk Dead Load;  $q_{DLf} = 10 \text{ psf}$ ;

#### Live Load

Catwalk Live Load;  $q_{LLf} = 40 \text{ psf}$ ; per OSSC Table 1607.1 A.1

Catwalk Live Load (point);  $P_{LL} = 300 \text{ lb}$ ; per OSSC Table 1607.1

Handrail Point Load;  $P_{LLh} = 200\text{lbs}$ ; per OSSC Table 1607.1

## Structural Calculations

### Grating

Total Load;  $q_{DLf} + q_{LLf} = 50 \text{ psf}$

1.5" thick Grainger Safe-T-Span (T2515) Grating Adequate by observation

**Use Grainger SAFE-T-SPAN (T2515) (model #: 873200)**

### Catwalk Framing

Note: Catwalk framing is comprised of L2.5x2.5x3/16 angles all around. The longest angle away from the wall controls.

Total Dead Load;  $P_{DL} = q_{DLf} * 3\text{ft} * 5\text{ft} = 150 \text{ lbs}$

Live Load;  $P_{LL} = 300 \text{ lbs}$

Span; 5 ft

See Appendix for Enercalc Output

**Use L2.5x2.5x3/16**

### Platform to Ledger Connection

Assume Seismic Horizontal Force ( $F_{ph}$ ) = 0.4

Total Seismic Force;  $V = 0.4 * P_{DL} = 60\text{lbs}$

Shear per Bolt;  $V/3 = 20 \text{ lbs}$

Tension/Compression Couple;  $T = V * (3\text{ft}/2) / 4\text{ft} = 22.5\text{lbs}$

**3/8" Diameter Bolts are adequate by observation**

### Ledger Connection to Studs

Total Shear;  $V = 60 \text{ lbs}$

Design for 300lb Shear Load

#12-14 HWH Shear Capacity;  $V_{allow} = 646 \text{ lbs} > V$ , OK

**Use (1) #12-14 HWH Screw at each Stud, (4) screws total**

**Hanging Rod**

Total Dead Load;  $P_{DL}/4 = 37.5 \text{ lbs}$

Floor Live Load (point);  $P_{LL} = 300 \text{ lb}$ ;

Total Load;  $P_{DL}/4 + P_{LL} = 337.5 \text{ lbs}$

**3/8" Diameter Rod Adequate by Observation**

**Strut between Roof Purlins**

Total Load;  $P_{DL}/4 + P_{LL} = 337.5 \text{ lbs}$

Span; 3'

P1000T Channel Capacity; 1130 lbs

Deflection; 0.13 inches

Per manufacturer notes, multiply capacity by 85% for the T-series & 50% for concentrated midspan loads

Adjusted Capacity;  $0.85 * 0.5 * 1130 \text{ lbs} = 480 \text{ lbs} > \text{Total Load, OK}$

**Use P1000T Channel**

**Channel to Girt Connection**

Total Load;  $P_{DL}/4 + P_{LL} = 337.5 \text{ lbs}$

1/2" bolt w/ P1326 Clip Adequate by Observation

See Appendix B for connection to (E) Girts

**Use P1326 Clip between P1000T Channel & Girt w/ 1/2" Bolts**

**Guardrail**

Try HSS1.625"x1.625"x3/16" Framing

Handrail Point Load;  $P_{Llh} = 200 \text{ lbs}$

Top Rail Length; 5'

Applied Moment;  $1.6 * 200 \text{ lbs} * 5 \text{ ft} / 4 = 400 \text{ lbs} * \text{ft} = 4.8 \text{ k} * \text{in}$

Moment Capacity;  $0.9 * 50 \text{ ksi} * 0.406 \text{ in}^3 = 18.27 \text{ kip} * \text{in, OK}$

**Use HSS1.625"x1.625"x3/16" Guardrail**

### Guardrail Post

Try HSS1.625"x1.625"x3/16" Framing

Handrail Point Load;  $P_{LLh} = 200\text{lbs}$

Guardrail Post Height; 42 in

Applied Moment;  $1.6*200\text{lbs}*42\text{in} = 13.44\text{k}*in$

Moment Capacity;  $0.9*50\text{ksi}*0.406\text{in}^3 = 18.27\text{ kip}*in$ , OK

### Use HSS1.625"x1.625"x3/16" Guardrail

#### Guardrail Connection to Framing

Assume guardrail posts are welded to the L2.5x2.5x3/16 framing

Moment;  $M = 1.6*P_{LLh}*42\text{in} = 13400\text{ lbs}_in$

Shear;  $1.6*P_{LLh} = 320\text{ lbs}$

Weld Size;  $a = 0.125\text{in}$

Length of Weld each side;  $l_w = 2.5\text{in}$

Weld Throat Size;  $t_w = \text{sqrt}(2)/2*a = 0.088\text{ in}$

Area of Weld;  $A_w = l_w*t_w = 0.221\text{ in}^2$

Total Area of Welds;  $2*A_w = 0.442\text{ in}^2$

Guardrail Post Width;  $b_m = 1.625\text{in}$

Width of Weld Group;  $b_w = b_m + 2*t_w = 1.801\text{ in}$

Section Modulus of Weld group;  $S_y = 1/3*b_w*l_w^2 = 3.752\text{ in}^3$

Weld stress due to bending;  $f_b = M/S_y = 3.572\text{ ksi}$

Weld stress due to tension;  $f_t = P_{LLh}/A_w = 1.448\text{ ksi}$

Total Weld Stress;  $f = (f_b^2 + f_t^2)^{1/2} = 3.854\text{ ksi}$

Allowable Weld Stress;  $0.6*0.75*70\text{ksi} = 31.5\text{ ksi}$ , OK

### Use min 1/8" Weld All-Around Guardrail Post to Framing

CAD DETAILS MANUAL  
ROOF SECONDARY FRAMING

NBS PURLIN SUPPORT METHODS

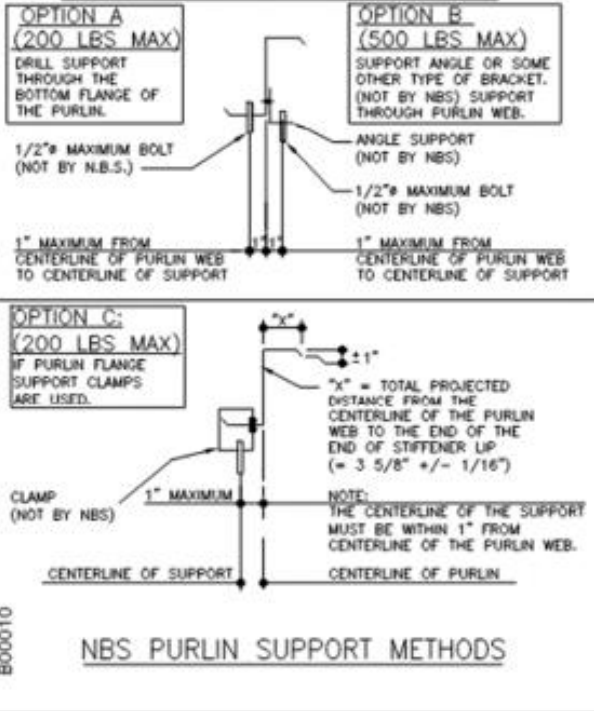

COLLATERAL DEAD LOADS, UNLESS OTHERWISE NOTED, ARE ASSUMED TO BE UNIFORMLY DISTRIBUTED. WHEN SUSPENDED SPRINKLER SYSTEMS, LIGHTING, HVAC EQUIPMENT, CEILINGS, ETC. ARE SUSPENDED FROM ROOF MEMBERS, CONSULT NUCOR ENGINEERING IF THESE CONCENTRATED LOADS EXCEED 500 POUNDS (USING THE WEB MOUNT DETAIL) OR 200 POUNDS (USING THE FLANGE MOUNT DETAIL), OR IF INDIVIDUAL MEMBERS ARE LOADED SIGNIFICANTLY MORE THAN OTHERS.

GENERAL RESTRICTION:

UNDER NO CIRCUMSTANCES CAN THE PURLIN STIFFENING LIP BE FIELD MODIFIED FROM THE FACTORY SUPPLIED CONDITION. ALSO DO NOT HANG ANYTHING FROM PURLIN STIFFENING LIP.

OPTIONS FOR SUPPORT ATTACHMENTS
